Opto-electronic rotary encoders
OsiSense XCC

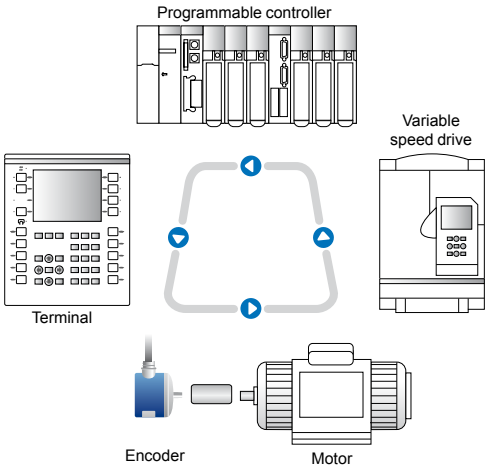
Applications

The increase in the power of processing systems, coupled with the requirements for high productivity, has created the need for continuous information in all areas of production regarding:
- counting, positioning by counting,
- absolute positioning,
- speed control.



Example

The positioning of a moving part is fully controlled by the processing system via the encoder.

- Processing units
please refer to our “Premium automation platform” catalogue.

- Variable speed drives
please refer to our “Variable speed drives and starters” catalogue.

Principle of the opto-electronic rotary encoder

The opto-electronic rotary encoder is an angular position sensor.

Mechanically coupled to a driving spindle of a machine, the shaft of the encoder rotates a disc that comprises a succession of opaque and transparent sectors.

Light from light emitting diodes (LEDs) passes through the transparent sectors of the disc as they appear and is detected by photosensitive diodes.

The photosensitive diodes, in turn, generate an electrical signal which is amplified and converted into a digital signal before being transmitted to a processing system or an electronic variable speed drive.

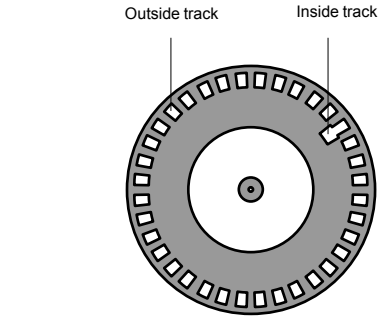
The electrical output of the encoder therefore represents, in digital form, the angular position of the input shaft.

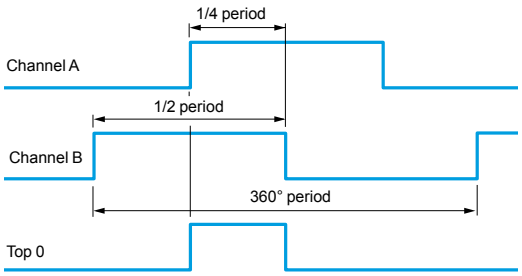
Types of opto-electronic rotary encoder

- Incremental encoders:
Counting, positioning by counting, speed.
- Parameterable incremental encoders:
Multiplication of the basic resolution of the disc using dip switches (the factory setting being that of the lowest value).
- Single turn and multiturn absolute encoders:
Absolute positioning.
- Fieldbus multiturn absolute encoders:
CANopen and PROFIBUS-DP.

Opto-electronic rotary encoders
OsiSense XCC

Incremental encoder





Principle

The disc of an incremental encoder comprises 2 types of track:
- one or several outside tracks (channels A and B), comprising “n” equal angular steps that are alternately opaque and transparent, with “n” being the resolution or number of periods of the encoder,
- an inside track comprising a single window, which serves as the reference point and enables reinitialisation at each revolution (top 0).

Schemes and settings

The operation of the photosensitive elements (LEDs + photosensitive diodes) is based on the real-time differential optical reading principle:
- the photosensitive elements of tracks A and B are offset so that each will simultaneously read only its respective slot (channels A and B are 90° electrically offset),
- the electronics operate following the principle of real-time differential measurement.

Channel B (rising edge) arriving before A in the clockwise direction viewed from base side.

Period: 360° electrical.
Cyclic ratio: 180° electrical ± 10%.
Phase displacement: 90° electrical ± 25%.

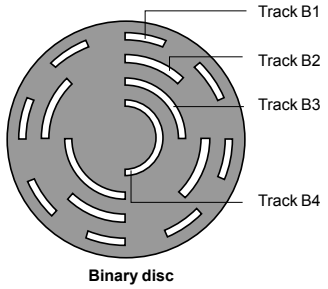
Advantages of real-time differential optical reading

Reading by offset photosensitive elements
- Radial play of encoder shaft greater than 30%, which is higher than traditional optical reading encoders.
- Maintains a phase displacement of channels A and B within the tolerance limits of the unit.

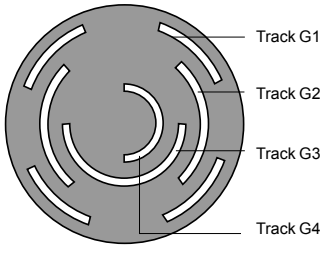
Triple light source emission
- Maintains cyclic ratio, even in the event of:
  - failure of one of the 3 light sources,
  - diminishing efficiency of the light sources (up to 30%),
  - fine dust deposit on the optical components, reducing signal strength of the photosensitive elements (up to 30%).

These advantages are the reliability factors of the XCC encoders.

Absolute encoder



Binary disc



Gray disc

Principle

The disc of an absolute encoder comprises “n” concentric tracks, equally divided into alternate opaque and transparent segments, and each track has its own transmitter and receiver.

The inside track is half opaque and half transparent. Reading of this MSB (Most Significant Bit) track determines in which half-turn the encoder is situated.

The next track is divided into 4 quarters, alternately opaque and transparent. The reading of this track, in conjunction with the previous track, determines in which quarter-turn the encoder is situated.

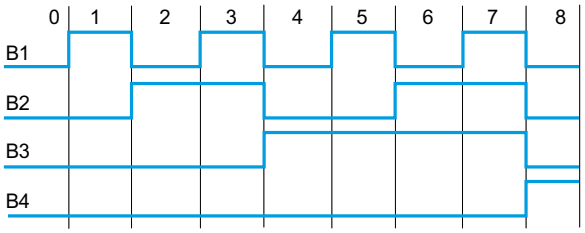
The following tracks enable successive determination of which eighth-turn, sixteenth-turn, etc. the encoder is situated.

The outside track corresponds to the LSB (Least Significant Bit) and provides the final accuracy. It has 2^n points corresponding to the resolution of the encoder.
Therefore, for each angular position of the shaft, the disc provides a code. This code can either be binary or Gray.
Following one complete revolution of the encoder, the same coded values are repeated.
The multiturn absolute encoder, in addition to providing the digital position within the revolution, also provides the total number of revolutions.

Absolute encoder (continued)

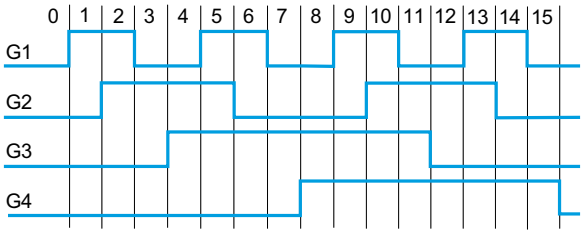
Binary coding

The binary code is directly usable by processing systems (programmable controllers for example) in order to execute calculations or comparisons, but has the disadvantage of having several bits which change state between 2 positions.



Gray coding

The Gray code offers the advantage of only changing one bit between 2 consecutive numbers.



Example of Gray code disc

	0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24
2^0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1	0	0
2^2	0	0	1	1	1	1	0	0	0	0	1	1	1	1	0	0	0	0	1	1	1	1	0	0	0
2^4	0	0	0	0	1	1	1	1	1	1	1	1	0	0	0	0	0	0	0	0	1	1	1	1	1
2^8	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	0
2^{16}	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1	1

Representation of the first 24 decimal values corresponding to the reading of the first 5 tracks.

Advantages of position detection by an absolute encoder

An absolute encoder continuously provides a code that is an image of the actual position of the moving object being monitored.

On power-up, or restart following a supply failure, the encoder provides data that is directly exploitable by the processing system.

Opto-electronic rotary encoders
Characteristics required to define an encoder

7 characteristics to be established

1 Function

■ Incremental encoder
Provides counting indication.

■ Single turn absolute encoder
Provides absolute position within each revolution.

■ Multiturn absolute encoder
Provides absolute position within each revolution and indicates total number of revolutions.

2 Diameter of housing

■ Incremental encoders
Ø 40, 58 and 90

■ Single turn and multiturn absolute encoders
Ø 58 and 90

3 Diameter of shaft

■ Ø 6 mm to 30 mm, depending on model
■ Reduction collars
For Ø 58 and 90 mm encoders, with Ø 14, 15 and 30 mm through shaft, reduction collars are available to reduce the diameters:
- from 14 to 6, 8, 10 and 12
- from 15 to 6, 8, 10, 12 and 14
- from 30 to 12, 16, 20 and 25.

4 Type of shaft

■ Solid shaft
The shaft of the encoder is mechanically linked to a drive shaft using a flexible coupling, which eliminates alignment inaccuracies.

■ Through shaft/Hollow shaft
The encoder is mounted directly on the drive shaft. A flexible mounting kit prevents encoder rotation and compensates for alignment inaccuracies.

5 Connection method

■ Pre-cabled with 2 m long shielded cable or M23/M12 connector.
■ Radial type connection.

6 Resolution

■ Number of points per revolution.
■ Number of revolutions (for multiturn absolute encoders).
■ On Ø 58 parameterable incremental encoders, this resolution can be adjusted using dip switches (multiplication factor up to 16 times on 9 basic resolutions).

7 Type of output

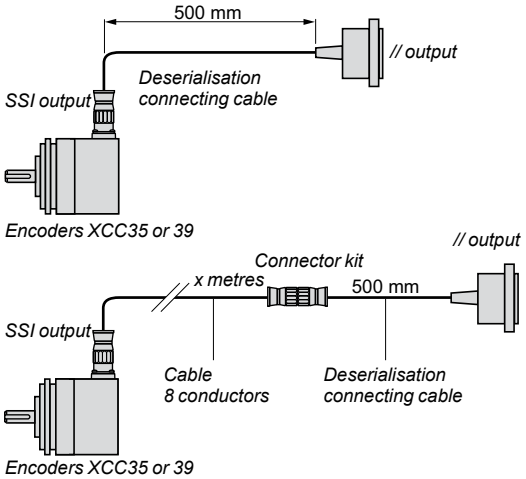
■ Incremental encoders
5 V output driver, RS 422, 4.75…30 V.
Push-pull output driver, 5…30 V, 11...30 V.

■ Single turn absolute encoders (depending on model)
Push-pull output driver, 11…30 V, binary code or Gray code.
SSI output without parity, 13-bit clock, 11…30 V, binary code or Gray code.

■ Multiturn absolute encoders (depending on model)
SSI output without parity, 25-bit clock, 11…30 V, binary code or Gray code.

■ Parallel outputs obtainable using converter connecting cables
The SSI versions can be converted to a parallel version by using the deserialisation connecting cable (see page 35).

■ Multiturn absolute encoders, communicating version, fieldbus:
□ CANopen: 11...30 V (see page 42).
□ PROFIBUS-DP: 11...30 V (see page 46).



Installation precautions

Type of cables

In an environment subject to considerable electrical interference, it is recommended that cables with several twisted pairs, reinforced by general shielding, be used.

For the signals, it is recommended that standard 0.14 mm^2/0.22 mm^2 conductors be used.

For 5 V supply encoders.
Due to line voltage drops, it is recommended that the 0 V and + V supply cables have the following minimum cross-sectional areas:
- 0.14 mm^2 if the encoder-supply distance is less than 30 m,
- 0.22 mm^2 if the encoder-supply distance is greater than 30 m.

Cabling

Separate, by as much as possible, the connecting cables to encoders and power cables. Also, avoid parallel cable runs. Maintain a distance of at least 20 cm and, in the event of cables crossing, ensure that the crossovers are at right-angles.

When using cables with twisted pairs (shielded or non shielded) group signal cables in common pairs.

In environments subject to electrical interference, it is recommended to earth the encoder base using one of the fixing screws.

Connect the control inputs to a potential (absolute encoder).
Connect all 0 V connections back to a star point, i.e. only one and same referential.
Earth the shielding throughout 360° using tap-off braids. This is to be done at both ends of each cable. To earth the shielding use at least 4 mm^2 cable.
As much as possible, earth the 0 V of the supply to the encoders on the supply side.
Maximum frequency of signals for SSI depending on distance:
Indicative values that can vary depending on the cable characteristics.

Distance (m)	Frequency (kHz)
50	400
100	300
200	200
400	100

Supply

It is imperative that regulated and smoothed power supplies, with a ripple factor on 24 V of 500 mV and on 5 V of 200 mV, are used that are specifically for the encoder.
Schneider Electric ABL7 range power supplies are available. Please refer to the website: www.schneider-electric.com.
For 5…30 V encoders, the supply via a transformer with a 24 V rms rectified and smoothed secondary is prohibited, since the DC voltage obtained is higher than the supply voltage limits of the encoder.
Prior to powering-up for the first time, ensure that the rated supply voltage of the encoder is suitable for the supply.

Opto-electronic rotary encoders
Characteristics required to define an encoder, installation, powering-up

Connection and powering-up precautions

Connection

The plugging-in or unplugging of a connector version encoder must only be done whilst the supply is disconnected.

Encoder supplied by central unit:
- disconnect supply to central unit,
- proceed with connection or disconnection,
- re-establish supply to central unit.

Encoder supplied by source external to central unit:
- disconnect supply to central unit, then disconnect supply to encoder,
- proceed with connection or disconnection,
- re-establish supply to encoder, then re-establish supply to central unit.

Powering-up

For synchronisation reasons, the powering-up or switching-off of the encoder must coincide with that of its associated electronics.

Frequency		**kHz**	300
Number of channels			3 channels: A, B, top 0 and complements $\overline{A}$,$\overline{B}$, $\overline{0}$
Encoders with type X output stage: 5 V output driver, RS 422, 4.75…30 V supply			
Supply voltage			⎓ 4.75…30 V Maximum ripple: 500 mV
Current consumption, no-load		**mA**	75 maximum
Protection			Against short-circuits and reverse polarity
Output current		**mA**	40 maximum
Output levels	Low level		0.5 V maximum (Is = 20 mA)
	High level		4.5 V minimum (Is = 20 mA)
Encoders with type Y output stage: push-pull output driver, 5…30 V supply			
Supply voltage			⎓ 5…30 V Maximum ripple: 500 mV
Current consumption, no-load		**mA**	75 maximum
Protection			Against short-circuits and reverse polarity
Output current		**mA**	40 maximum
Output levels (for U supply = 30 V) *(1)*	Low level		0.5 V maximum (Is = 20 mA)
	High level		V supply - 2.5 V minimum (Is = 20 mA)

Multiturn absolute encoders
OsiSense XCC
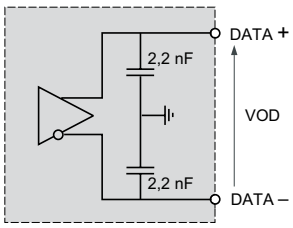
Ø 90 mm encoders

Environment				
Encoder type			**XCC3912P●●●●●**	**XCC3930T●●●●●**
Conformity			CE	
Temperature	Operation (housing)	**°C**	- 20…+ 85	- 10…+ 75
	Storage	**°C**	- 30…+ 85	- 20…+ 85
Degree of protection	Conforming to IEC 60529		IP 66	IP 65
Vibration resistance	Conforming to IEC 60068-2-6		10 gn (f = 10…2 kHz)	
Shock resistance	Conforming to IEC 60068-2-27		30 gn, duration 11 ms	
Resistance to electromagnetic interference	Electrostatic discharges		Conforming to IEC 61000-4-2: level 3, 8 kV air; 4 kV contact	
	Radiated electromagnetic fields (electromagnetic waves)		Conforming to IEC 61000-4-3: level 3, 10 V/m	
	Fast transients (Start/Stop interference)		Conforming to IEC 61000-4-4: level 3, 2 kV (1 kV for inputs/outputs)	
	Surge withstand		Conforming to IEC 61000-4-5: level 2, 1 kV	
Materials	Base		Aluminium	
	Housing		Zamak	
	Shaft		Stainless steel	
	Ball bearings		6001ZZ	6807ZZ
Mechanical characteristics				
Shaft type			Ø 12, solid shaft (g6)	Ø 30, through shaft (H7)
Maximum rotational speed	Continuous		6000 rpm	3600 rpm
Shaft moment of inertia		**g.cm²**	150	56
Torque		**N.cm**	1	0.8
Maximum load	Radial	**daN**	20	8
	Axial	**daN**	10	5
Electrical characteristics				
Connection	Connector		**Encoders with SSI output stage types SB (N), SG (N):** M23, 12-pin male connector	
Frequency			**Encoders with SSI output stage types SB (N), SG (N):** 100 to 500 kHz clock	
Encoders with type SBN or SGN (Gray) output stage: SSI output without parity, 25-bit clock, 11…30 V supply, binary code (SB) or Gray code (SG)				
Supply voltage			⎓ 11…30 V Maximum ripple: 500 mV	
Current consumption, no-load		**mA**	100 maximum	
Protection			Against short-circuits and reverse polarity	
Output level			Idata = 20 mA |VOD| > 2 V	

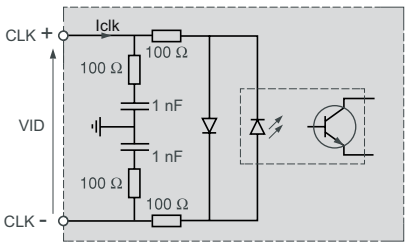
Schemes

RS 422 data output



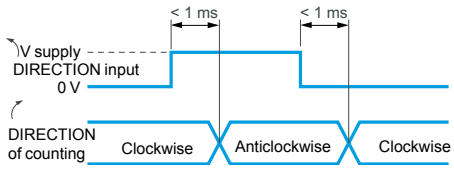
Idata = 20 mA |VOD| > 2 V

Isolated clock input



|VID| maximum: 5 V
|Iclk| maximum: 15 mA

DIRECTION input



Input stage - Reset to zero

Ø 90 mm multiturn absolute encoders with SSI output convertible to parallel output

The SSI versions can be converted to a parallel version using the deserialisation connecting cable **XCCRM23SUB37●●**, see pages 34 and 35.

Solid shaft, Ø 12 mm

Resolution	Connection method *(1)*	Output stage type *(2)*	Supply voltage	Reference	Weight kg
8192 points 4096 turns	Connector, radial M23 male	SSI, 25-bit, binary	11…30 V	**XCC3912PS84SBN**	1.840
		SSI, 25-bit, Gray	11…30 V	**XCC3912PS84SGN**	1.840

Through shaft, Ø 30 mm *(3)*

Resolution	Connection method *(1)*	Output stage type *(2)*	Supply voltage	Reference	Weight kg
8192 points 4096 turns	Connector, radial M23 male	SSI, 25-bit, binary	11…30 V	**XCC3930TS84SBN**	1.060
		SSI, 25-bit, Gray	11…30 V	**XCC3930TS84SGN**	1.060

Reduction collars for encoders with through shaft, Ø 30 mm

For use with	Diameter	Reference	Weight kg
Encoders with through shaft XCC3930TS84●●●	Ø 12 mm	**XCCR290RDP12**	0.060
	Ø 16 mm	**XCCR290RDP16**	0.060
	Ø 20 mm	**XCCR290RDP20**	0.030
	Ø 25 mm	**XCCR290RDP25**	0.020

*(1) For female connector use **XZCC23FDP120S** or pre-wired connectors (L = 2, 5 or 10 m), see page 35.*
(2) For characteristics of the output stage type (indicated by last letter of the reference), see page 30.
(3) Anti-rotation device included with encoder.

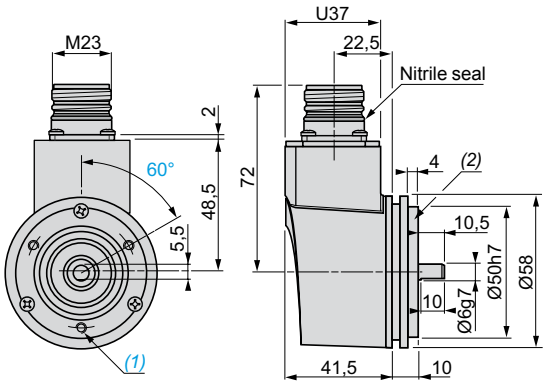
Multiturn absolute encoders

OsiSense XCC

Ø 58 mm encoders

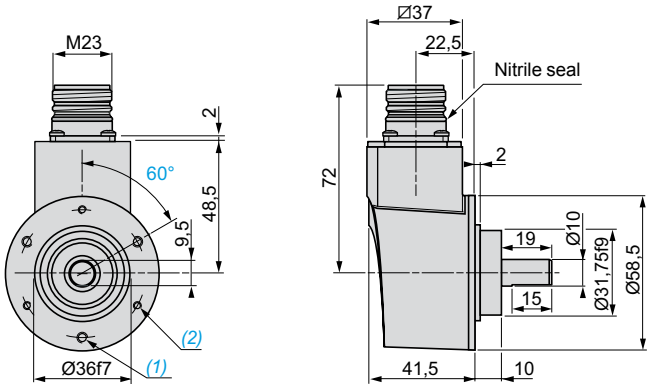
Ø 58 mm encoders

XCC3506PS84SBN, XCC3506PS84SGN



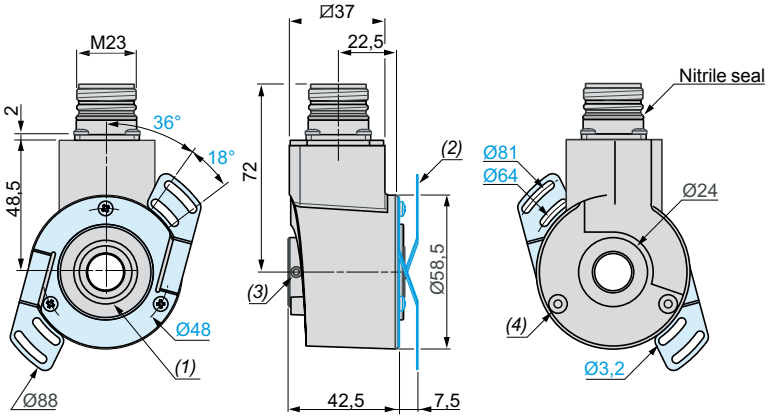
(1) 3 M4 holes at 120° on 42 PCD, depth: 10 mm.
(2) Collar XCCRB1 mounted.

XCC3510PS84SBN, XCC3510PS84SGN



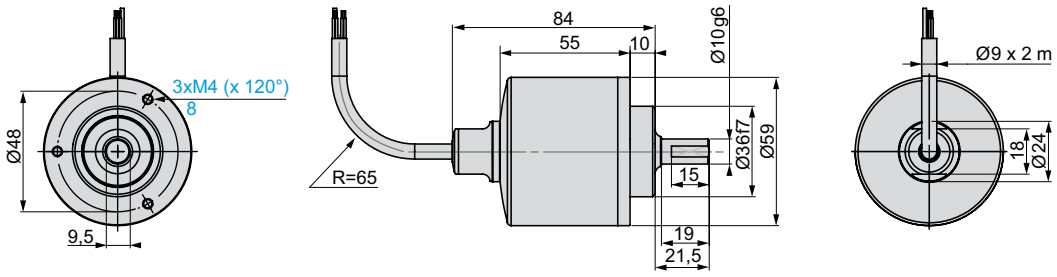
(1) 3 M4 holes at 120° on 48 PCD, depth: 8 mm.
(2) 3 M3 holes at 120° on 48 PCD, depth: 8 mm.

XCC3514TS84SB, XCC3514TS84SG



(1) Through shaft, Ø 14 (H7).
(2) Flexible mounting kit, 1 x XCCRF5N mounted.
(3) 2 HC M4 x 4 locking screws.
(4) Hole for M3 x 6 self-threading screw.

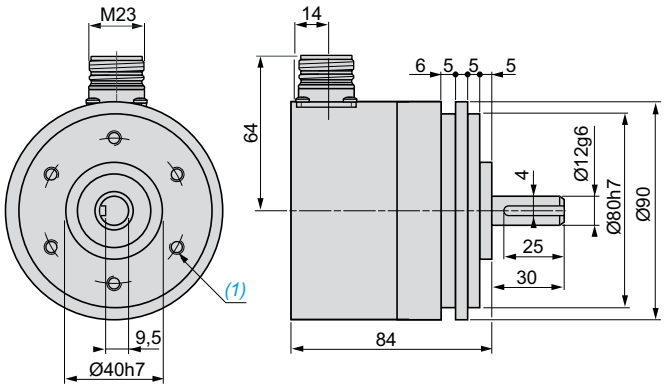
XCC3510SPA48SGN



R: minimum bend radius = 65 mm.

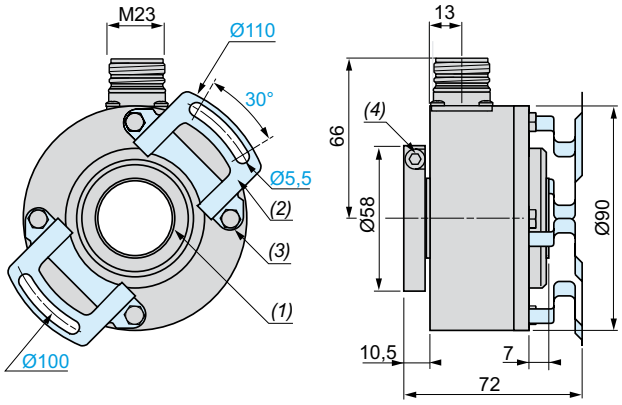
Ø 90 mm encoders

XCC3912PS84S●N



(1) 6 holes M6 x 1 at 120° on 60 PCD, depth: 12 mm maximum.

XCC3930TS84S●N

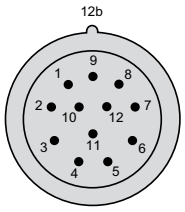


(1) Through shaft, Ø 30 (H7).
(2) Anti-rotation device, 1 x XCCRF9N, mounted.
(3) 4 M5 x 6 on 78 PCD.
(4) 3 HC M5 x 6 stainless steel A2 locking screws.

Connector version encoders

Encoder with SSI output (types SBN and SGN)
M23, 12-pin connector, anticlockwise connections

Male connector on encoder (pin view)



Twisted cable pairs + general shielding must be used.

Pin number	1	2	3	4	5	6	7	8	9	10	11	12
Signal/Supply	0 V	Data +	Clk +	R	Direction (1)	Reset to zero	R	+ V	R	Data –	Clk –	R

R = Reserved (do not connect).
(1) ↷ : Clockwise direction, ↶ : Anticlockwise direction.

Selection of code progression direction
The DIRECTION input enables the code progression to match the rotational direction of the encoder shaft (clockwise or anticlockwise).
Clockwise direction: connect pin 5 to 0 V.
Anticlockwise direction: connect pin 5 to + V.

Reset to zero
The RESET input enables the encoder to be set to the zero position.
It is actuated by applying an 11…30 V DC supply to pin 6, whilst the shaft is stopped, for the following times:
- over 100 ms for XCC3506, XCC3510 and XCC3912,
- over 1 s for XCC3930T.

Following a reset to zero, the pin 6 connection must be re-established to 0 V.

Note: *In environments subject to electrical interference, it is recommended to earth the encoder base using one of the fixing screws.*

Cable version encoder

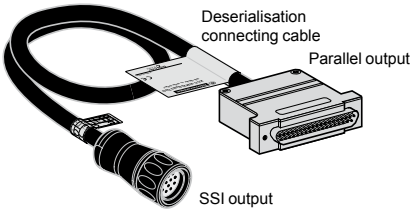
Wire colour	BK Black	BN Brown	GN Green	VT Violet	BU Blue	RD Red	OG Orange	YE Yellow
Signal/Supply	0 V	Data +	Clock +	Direction (2)	Reset to zero	+ V	Data -	Clock -

(2) ↷ : Clockwise direction, to 0 V.
↶ : Anticlockwise direction, to + V.

Multiturn absolute encoders
OsiSense XCC
Ø 58 mm and Ø 90 mm encoders
Connection accessories

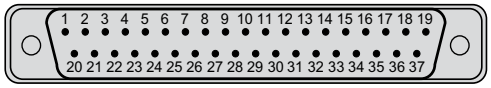
Connector version multiturn absolute encoders



The deserialisation connecting cable **XCCRM23SUB37●●** (see page 35) enables conversion, by simple connection, of encoders **XCC35●●** and **XCC39●●** with SSI output to parallel output.

Characteristics

Supply	⎓ 11 to 30 V
Encoder input/output	Levels RS 422
Parallel outputs	Push-pull protection against short-circuits
Operating temperature	0 to 50 °C



Male connector (pin view)

■ Selection of code progression direction
The DIRECTION input enables the code progression to match the rotational direction of the encoder shaft (clockwise or anticlockwise).
Clockwise direction: connect pin 30 to an 11…30 V DC supply.
Anticlockwise direction: connect pin 30 to 0 V.

■ Reset to zero
The RESET input enables the encoder to be set to the zero position. It is actuated by applying an 11…30 V DC supply to pin 27 for more than 1 second.

■ Encoder selection
The SELECT input enables encoder selection when several units are connected in parallel on the same data bus.
Encoder selected: apply 0 V potential to pin 28.
Encoder not selected: apply 11…30 V DC to pin 28.

■ Data locking
The LATCH input, particularly useful for high speed applications, enables the freezing of the encoder data output whilst reading the code.
Function not actuated: apply 0 V potential to pin 29.
Function actuated: apply 11…30 V DC to pin 29.

36 x 0.14 mm² shielded cable and SUB-D 37-pin end connector connections

***Note:** In environments subject to electrical interference, it is recommended to earth the encoder base using one of the fixing screws.*

Schemes

LATCH input

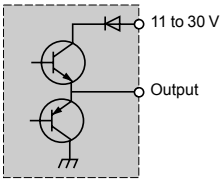
	min.	max.
Level "0"	0 V	0.3 x V supply
Level "1"	0.7 x V supply	V supply
I Latch	< 5 mA	

DIRECTION input

	min.	max.	
Level "0"	0 V	0.3 x V supply	Increasing Clockwise
Level "1"	0.7 x V supply	V supply	Increasing Anticlockwis
I DIR	< 5 mA		

PUSH-PULL

Supply: 11 to 30 V ⎓
Maximum ripple: 500 mV
Protection against reverse polarity
Max. no-load consumption: 50 mA (30 mA typical on 24 V)



Max. current: 20 mA
Level "0" max.: 1.5 V
Level "1" min.: V supply - 2.5 V
Protection against short-circuits
NPN/PNP compatible

SELECT input

	min.	max.
Level "0"	0 V	0.3 x V supply
Level "1"	0.7 x V supply	V supply
I Select	< 5 mA	

Input stage - Reset to zero

	min.	max.
Level "0"	0 V	0.3 x V supply
Level "1"	0.7 x V supply	V supply
I Reset	< 5 mA	

***Note:** Do not neglect the LATCH and SELECT inputs. Connecting them to 0 V makes the outputs active.*

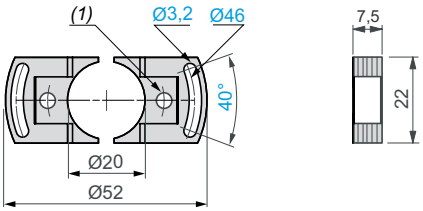
Anti-rotation devices (flexible mounting kit)

XCCRF4

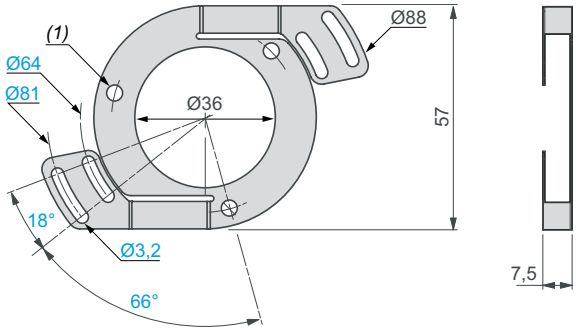
Mounting on Ø 40 mm encoder XCC1406T



(1) 2 holes Ø 4 at 180° on 30 PCD. TC M4 x 5 screw fixings.

XCCRF5N

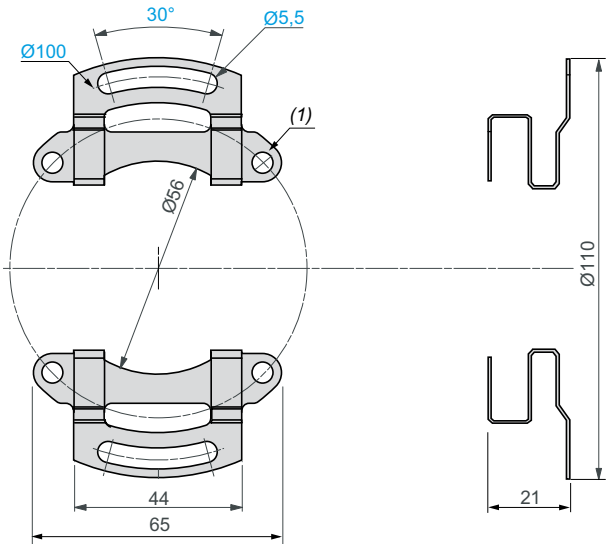
Mounting on Ø 58 mm encoders XCC1514T, XCC2514T and XCC3514T



(1) 3 holes Ø 4.1 at 120° on 48 PCD. TC M3 x 6 screw fixings.

XCCRF9

Mounting on Ø 90 mm encoders XCC1930T, XCC2930T and XCC3930T

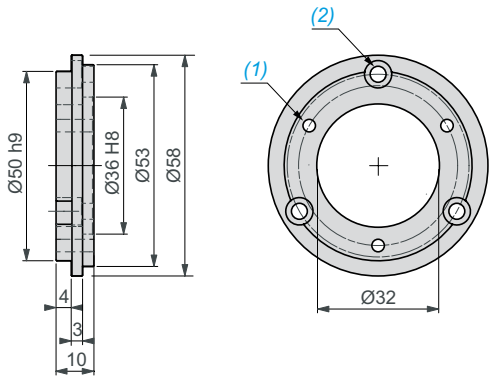


(1) 4 holes Ø 5.2 at 90° on 78 PCD. TH M5 x 6 screw fixings.

Collar kits

XCCRB1

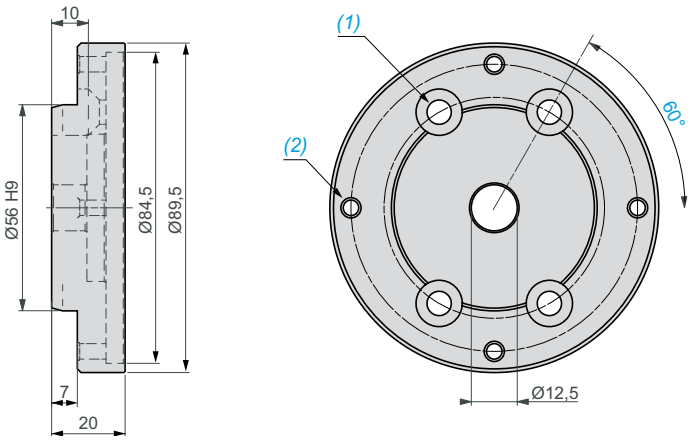
Collar for synchro mounting, for Ø 58 encoders:
XCC15●●P, XCC25●●P and XCC35●●P



(1) 3 holes M4 x 0.7 at 120° on 42 PCD. TC M3 x 8 screw fixings.
(2) 3 counterbored holes for TC M4 x 8 screws at 120° on 48 PCD.

XCCRB2

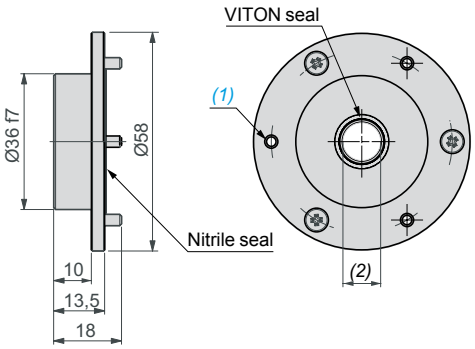
Interface collar for Ø 90 encoders:
XCC1912P, XCC2912P, XCC3912P



(1) 4 holes Ø 6.6 at 120° on 60 PCD. Countersunk for TZ M6 x 16 screws.
(2) 4 holes M5 x 0.8 at 90° on 78 PCD.

XCCRB3

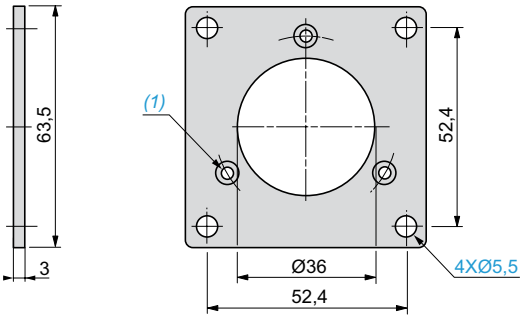
IP 67 sealed collar for Ø 58 encoders:
XCC1510P, XCC2510P and XCC3510PS●●S●N



(1) 3 holes M3 x 0.5 at 120°on 48 PCD. TZ M3 x 8 screw fixings.
(2) Shaft Ø 10 mm.

Fixing collar XCCRB6

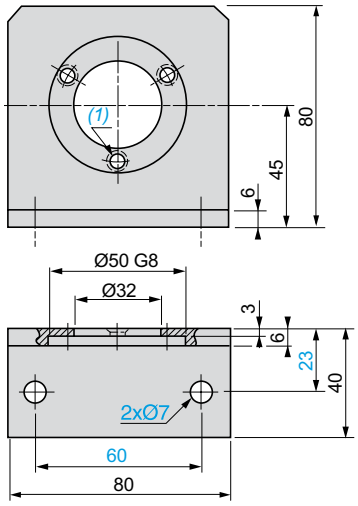
Fixing collar fixation 2" for Ø 58 encoders:
XCC1510, XCC2510 and XCC3510



(1) 3 holes M3.2 at 120° on Ø 48 mm.

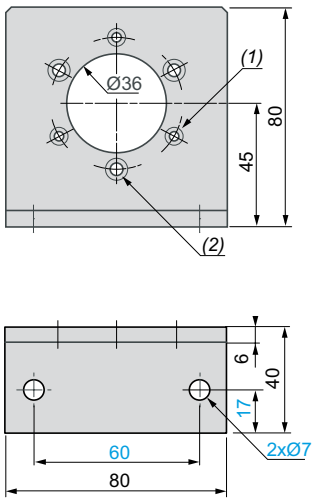
Plain brackets

XCCRE5S



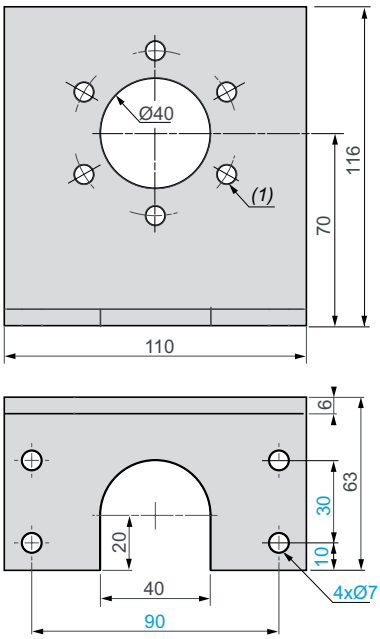
(1) 3 holes Ø 4.5 at 120° on 42 PCD.

XCCRE5SN



3 CHC M3 x 8 screws included.
(1) 3 counterbored holes for CHC M3 screws at 120° on 48 PCD.
(2) 3 counterbored holes for CHC M4 screws at 120° on 48 PCD.

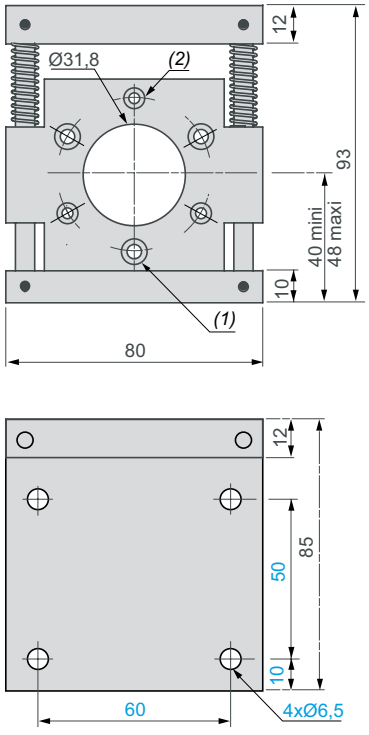
XCCRE9SN



(1) 6 holes Ø 7 for CHC M6 screws at 60° on 60 PCD.

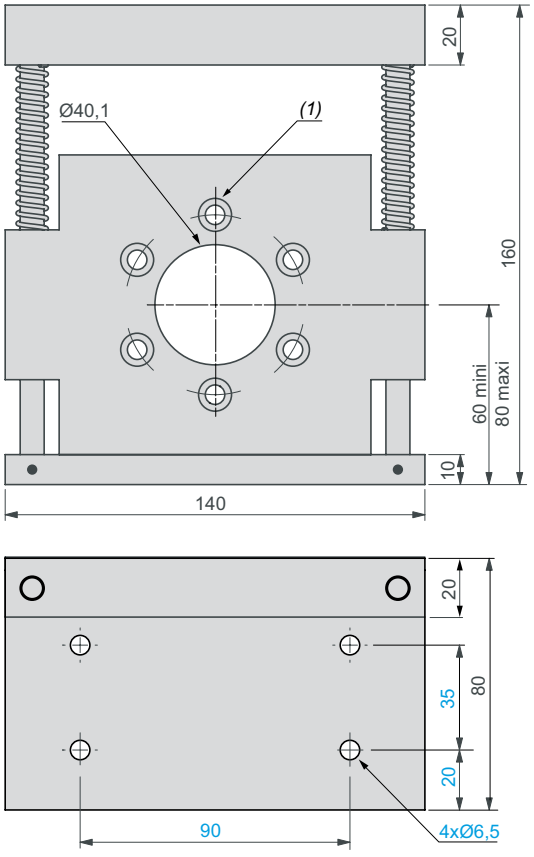
Brackets with play compensator

XCCRE5RN



CHC M3 x 12 screws included
(1) 3 counterbored holes for CHC M3 screws at 120° on 48 PCD.
(2) 3 counterbored holes for CHC M4 screws at 120° on 48 PCD.

XCCRE9RN



(1) 6 counterbored holes for CHC M6 screws at 120° on 60 PCD.

Presentation

The OsiSense XCC CANopen multiturn absolute Ø 58 mm encoder is designed to meet the requirements for configurations encountered in communicating industrial installations. Models **XCC3510PS84CBN** and **XCC3515CS84CBN** integrate CANopen communication protocols as standard.

The CAN-Bus interface integrated in the absolute rotary encoder supports all CANopen functions. The following modes can be programmed and made operational or stopped: Pooling mode, Cyclic mode and Sync mode. The application specific protocol supports the programming of the following additional functions:
- code sequence,
- resolution per revolution,
- global resolution,
- presets,
- speed and address.

The connection housing ensures simple assembly and addressing. It performs the function of a T coupler and has M12 connectors for the bus incoming and outgoing signals.
The rotary encoder can be supplied via the CANopen bus or by using the dedicated PG9 cable gland. The address of the equipment is adjusted from the rotary switches.
Encoders **XCC3510PS84CBN** and **XCC3515CS84CBN** have 2 LEDs located on the rear face of the housing to facilitate monitoring and diagnostics conforming to standard DR303-3 v1.3.0 (CIA). The LEDs provide information regarding the operative mode, bus errors, supply problems.

Standards

Encoders **XCC3510PS84CBN** and **XCC3515CS84CBN** conform to:
- standard ISO 11898,
- specifications DS301 V4.02/CAN2.A, DS406 V3.2, DR303-1 V1.7 (cabling and connector), DR303-3 V1.3 (light indicator).

They are CiA certified and meet the requirements of the Schneider Electric interoperability standards.

Encoder setting-up/configuration software

The CANopen bus is configured with the aid of SyCon version 2.9 software, reference SYC SPU LF, to be ordered separately.
The EDS file, reference TEXCC35CBN_0101E.eds, required for encoder configuration can be downloaded from our website www.tesensors.com.

Configurable parameters

■ **Transmission speed**
Default value: 250 Kbaud, configurable from 10 Kbaud (distance 6700 m) to 1 Mbaud (distance 12 m).
■ **Address**
defines encoder identification on the bus, 1 to 99. Default value: id = 1. It is defined using 2 coding wheels located in the housing.
■ **Resolution**
defines the number of points per revolution (0 to 8191).
■ **Global resolution**
defines the total number of codes of the encoder (0 to 33,554,431).
■ **Direction**
enables defining of the counting direction of the encoder (increasing clockwise or anticlockwise) in relation to its mechanical position.
■ **Reset to X**
defines the value of its actual position (reset to X or reset to amount).

Communication modes

■ **Pooling mode**
The encoder responds to requests from the master. This mode enables programming and reading to the encoder parameters whilst in position.
■ **Cyclic mode**
The encoder transmits its data cyclically. The transmission period is programmable from 0 to 65,535 ms.
■ **Sync mode**
The encoder transmits its data when the master sends a synchro.

Presentation

The OsiSense XCC PROFIBUS-DP multiturn absolute Ø 58 mm encoder is designed to meet the requirements for configurations encountered in communicating industrial installations. Models **XCC3510PV84FBN** and **XCC3515CV84FBN** integrate PROFIBUS-DP communication protocols as standard.

The PROFIBUS-DP bus interface integrated in the absolute rotary encoder is based on RS 485 transmission and enables speeds of up to 12 Mbps. Exchanges are possible from the master to the encoder. The application specific protocol DP-V0 conforms to the class 2 profile for encoders and supports the following functions:
- code sequence,
- resolution per revolution,
- global resolution,
- presets,
- soft stops,
- speed and address.

The housing of the encoders provides easy access to 2 coding wheels for configuration of the address. 2 LEDs are integrated to facilitate diagnostics. It performs the function of a T coupler with 3 x PG9 cable glands (2 for the bus incoming and outgoing signals, 1 for the encoder supply).
PROFIBUS-DP encoders have 2 LEDs to indicate the encoder status:
- Green LED: “Sta”
- Red LED: “Err”.

Standards

PROFIBUS-DP encoders **XCC3510PV84FBN** and **XCC3515CV84FBN** conform to:
- international standards IEC 61158 and IEC 61784 for PROFIBUS-DP communication
- the PROFIBUS-DP standard EN 50170 Class 2 in accordance with profile 3.062 V 1.1 for the encoder application.
They are certified by the PNO organisation and meet the requirements of the Schneider Electric interoperability standards.

Encoder setting-up/configuration software

The PROFIBUS-DP bus is configured with the aid of SyCon version 2.9 software, reference SYC SPU LF, to be ordered separately.
The GSD “gsd file” required for encoder configuration can be downloaded from our website www.tesensors.com, under reference TELE4711.GSD.

Configurable parameters

■ **Speed**
defines the instantaneous speed in 16-bit binary. It can be data according to 1 of 4 modes:
□ Steps/10 ms,
□ Steps/100 ms,
□ Steps/s or rpm.

■ **Address**
Addressing is performed using 2 coding wheels located in the housing. The addresses possible are 1 to 99.

■ **Resolution**
defines the number of points per revolution (0 to 8191)

■ **Global resolution**
defines the total number of codes of the encoder (0 to 33,554,431)

■ **Direction**
enables defining of the counting direction of the encoder (increasing clockwise or anticlockwise) in relation to its mechanical position

■ **2 soft stops**
one high stop and one low stop can be defined and extracted from the position word

■ **Reset to X**
defines the value of its actual position (reset to X or reset to amount).

Communication modes

2 communication modes are possible:
- simple and fast, cyclic and deterministic exchanges between the master and the encoder,
- acyclic exchanges.
